

Greetings to whom it may concern...I would like to go on record as being opposed to the proposed "Broadband over PowerLine" system due to its harmful interference it will cause to one of our very precious natural resources used both for personal use and in the event of emergencies in our country...Yes, folks in the rural ares should have access to the web, but not at the expense of a proven system used by mamy and the group is growing daily...Thank you for your time...Paul L. Eakin, amatuer radio callsign KJ4G, a "ham" for almost 34 years, using the frequencies that would be harmed by this proposal...
